Abstract (en)
[origin: FR2768337A1] Triple water-in-oil-in-water emulsions for cosmetic and dermatological use have an external aqueous phase and a discontinuous oily phase with a primary water-in-oil emulsion, and at least one photo protecting system that filters UV-A and/or UV-B radiation. Triple water-in-oil-in-water emulsion comprises: (a) an external aqueous phase; (b) a discontinuous oily phase with an internal aqueous phase containing a primary water-in-oil emulsion having, as water-in-oil emulsifying agent, a block copolymer consisting of a polymeric sequence derived from a monohydroxy carboxylic acid and a polymeric sequence derived from an alkyl glycol or polyalkylene glycol; and (c) at least one photoprotecting system for filtering UV-A and/or UV-B radiation.
