Abstract (en)
[origin: DE19701896A1] The invention concerns a granular secondary alkane sulphonate essentially comprising fine-particle solid secondary alkane sulphonate and an additive. This granular secondary alkane sulphonate is obtained by grinding and mixing coarse secondary alkane sulphonate with an additive, preferably fine-particle silicic acid. The alkane sulphonate prepared in this way can be used in solid washing and cleaning agents or directly for producing extrudates, mouldings or compacts.
