Abstract (en)

[origin: DE19707650A1] The invention concerns a method of cleaning statically chargeable surfaces, wherein an antistatic aqueous cleaning agent is applied to the surfaces to be cleaned and is then allowed to drain off. The invention further concerns antistatic cleaning agent concentrates which can be used in this method and, when water is added, provide an antistatic cleaning solution. The concentrate contains: a) between 1 and 12 wt % of one or a plurality of alkoxyated primary or secondary amines; b) between 1 and 10 wt % of a fatty acid salt; c) between 2 and 12 weight % of one or a plurality of weakly foaming non-ionic surfactants; the remainder being water or an aqueous solution of further auxiliary and active substances. The agent according to the invention can be used, for example, to clean plastics objects in the foodstuffs industry.
