Abstract (en)

The handling mechanism has a casing (1) housing a part (26) that can move in translation. One end (26a) of the mobile part is connected to an actuator (25) and the other end (26b) of the moving part is connected to a lock mechanism (24). The casing has two separated holes (8,9) each receiving a position detector (18,19) for the moving part (26) or its actuator rod (25a).
