Abstract (en)

A continuous or discrete sheet printing process of dyestuffs is disclosed, said dyestuffs being selected from the group comprising liquid crystals, thermochromic and photochromic materials for displaying normally concealed wordings and/or figures and/or signs. The process is versatile in its various printing steps, the kind of dyestuff to be applied and the support to be printed. A label, card or sheet obtained by the process is also disclosed, for various applications of preservation, display of concealed messages, anticounterfeit, correct temperature for using products containing them and for promotional and advertising purposes.
