Abstract (en)
[origin: EP0967351A2] At least one functional element (12) in the form of a connecting rod, slide rod or slide piece is longitudinally movably mounted behind a cover (20) and is connected to a flat bolt element (30) protruding from the cover. The bolt element pivots on an axle (32) mounted in the functional element, outside its closed position and can be lowered at right angles to the functional element's direction of movement in its longitudinal movement behind the cover. The functional element and cover have lengthwise slits (13,22) whose width corresponds to the thickness of the bolt .
