Abstract (en)

[origin: WO9842433A1] The invention relates to a method for discharging a liquid-dissolved or finely distributed medium enabling said substance to be used in a remote place from the point of discharge. A limited amount of liquid is arranged in a tubular housing with one open end. At the other end of the housing, a highly pressurized gaseous blowing agent is applied to the liquid for a short period in order to produce a flying jet of limited length.
