Abstract (en)
[origin: WO9842829A1] The invention relates to a method for the production of a purified eucaryotic crystallizable proteasome preparation, and to the proteasome preparation obtained by this method. The invention also relates to a purified eucaryotic proteasome preparation in crystallized form. With the aid of crystal data from this proteasome preparation, new proteasome inhibitors can be identified and produced, in particular with the aid of computer assisted modelling programmes.
