Abstract (en)
[origin: WO9841689A1] The invention concerns an elevated track slab device, in particular for mounting and supporting rails, said device comprising at least one finished part slab (1) with support elements (3) which are provided at the ends of the finished part slab (1) and extend longitudinally or transversely to the track. The device further comprises troughs (2) which are used to support the support elements and rest on a foundation or bed and in which the support elements (3) are held and secured or supported.
