Abstract (en)
[origin: DE19758291A1] The tap is mounted in a sleeve (14) with flange (15) and inlets (12) on which hot- and cold-water supply hoses are pushed and held by friction. The sleeve fits with its outside diameter (14) in the bore (13) of a connector fixture (7). The connector fixture is attached permanently to e.g. a sink on which it is clamped between a flange (17) and a nut (10). The sleeve is held by friction in the connector fixture. The friction between the outside diameter of the sleeve and the bore of the fixture is larger than the friction between the inlets (12) in the flange (15) and the infeed hoses
