Abstract (en)

[origin: WO9841712A1] The invention relates to a dismountable scaffolding with vertical struts (11) and horizontal struts (12). A base plate (13) extends between said struts and is provided with hook-shaped end fittings (15, 15') on each front face. Said base plate can be placed on a rail section (14, 14') in such a way that vertical locking or unlocking (16, 17) can be selectably achieved by sliding the end fitting (15, 15') in the direction of the rail section (14, 14'). Horizontal antislip locking (18, 19) is achieved and cancelled by raising the end fitting (15, 15') thereby preventing said fitting (15, 15') from sliding into an inactive vertical locking position when it is in an active vertical locking position (16, 17).
