Abstract (en)

A connecting element (1) for a composite section (100) consisting of a first and a second section (10, 30) comprises two plates (3, 4), one lower (3) and one upper (4), joined by a joining element (5), and a lever (6) integral with the joining element (5); the plates (3, 4) have central axes (103, 104) which are not in the same plane and are inclined at a predetermined angle to each other; the lever (6) is provided with a stop element (7) which engages with a check (18) on the first section (10) to assume a first and a second limit position in which it brings the lower plate (3) into a first and a second inclined position respectively with respect to a first channel (16) of the first section (10), and brings the upper plate (4) into a longitudinal position and into a transverse position respectively with respect to a second channel (31) of the second section (30). <IMAGE>
