Abstract (en)

In a window comprising a pivotable sash (6) arranged in a main frame (7) and being provided with an adjustable ventilation cover (2) for providing ventilation in a closed position of the sash through a ventilation passage (3) between opposed members of the sash (6) and the main frame (7) and sash locking means (8) connected with the ventilation cover (2), one or more burglary preventing members (4) are arranged in the ventilation passage to prevent manual access to the ventilation cover (2) and/or the locking means (8) from the external side of the window. Preferably, a burglary preventing member (4) is formed as a shield having openings (9) for the ventilation air and being firmly connected to the top member of the main frame (7) and covering the ventilation passage (3) by closely fitting an upper edge part (6a) of the top member of the sash (6). <IMAGE>
