Abstract (en)

The cam follower has a main body with parallel walls (4,5) carrying a bolt (8) with a roller (13), which faces a control cam. The roller is of an axial length to bridge the distance between the walls apart from functional gaps required for rotation. A locking element (12) to secure the bolt engages into a recess (11) in the bolt and is located within the axial length of the roller. The bolt is turnably supported in slide bearings (9) in apertures (7) in the walls.

Abstract (de)

Zur axialen Sicherung einer Rolle tragenden Bolzens in einem Kipphebel unter Bereitstellung einer maximalen Tragfähigkeit der Rolle beziehungsweise des Bolzens wird vorgeschlagen, ein unter radialer Vorspannung stehendes Rastelement zur Anlage in einer Vertiefung des Bolzens zu bringen, wobei dieses Rastelement im Bereich der axialen Erstreckung der Rolle angeordnet ist.
