Abstract (en)
[origin: EP0969702A2] A lighting system has at least one light unit that can be controlled in open or closed loop fashion using a control device (4) equipped with at least one brightness sensor. The parameters can be adjusted through a sensor sampler located at the control device and at the control device is provided a display (5) for the state, showing the parameters to be adjusted. The display is an LED. The control device contains a flashing circuit which shows the selected parameter to be adjusted by the flashing of the diode. The control device can be switched over into a programming mode in which the parameters can be adjusted by continuous operation of the sensor sampler over a certain time span.
