Abstract (en)

[origin: DE19709125A1] The invention relates to substituted chinolines of general formula (I) which are highly effective inhibitors of cholesterol ester transfer proteins (CTEP) and stimulate reverse cholesterol transfer. The inventive substances lower the LDL cholesterol level in the blood while at the same time increasing the HDL cholesterol level. Said substances can therefore be used in the treatment and prevention of hyperlipoproteinemia, hypolipoproteinemia, dyslipidemia, hypertriglyceridemia, combined hyperlipidemia or arteriosclerosis.
