Abstract (en)
[origin: WO9842936A1] The invention relates to a container (10) for accommodating goods (17) such as especially commercial and industrial goods, mail consignments or similar, comprising several structural members in the form of side walls (11), a rear wall (12) and a roofing (13), and at least one opening for access (15) which can be closed by means of at least one door element or closing element. The structural members determine together the external dimensions of the container (10). The invention provides a space-saving container (10) which can be placed anywhere, since the external dimensions of the non- walk-in container (10) correspond to the external dimensions of the commercial and industrial goods (17), and movement elements are provided in the container (10) for moving the goods (17) during loading and unloading. The container (10) can also be used to accommodate wheelchairs (17').
