Abstract (en)
[origin: WO9808737A2] A packaging system for the transportation and storage of materials, including radioactive and other hazardous materials. The container comprises a primary container removably received within a secondary container, and the secondary container being removably received within a tertiary container. In preferred embodiments the primary container can be centrifuged to minimize unrecoverable material, and in especially preferred embodiments involving radioactive materials, the primary container is the only component that must be considered as radioactive waste.
