Abstract (en)
[origin: WO9843265A1] The invention relates to a compressed gas power switch having a first actuatable electric arc contact (2), a second stationary electric arc contact (3), a rated current pathway (4) and a compression device (9). At least the first actuatable electric arc contact (2) is supported by a switching tube. The discharge volume (16) at the exit (15) of the switching tube (16) is connected to the low pressure chamber (18) by blow-out openings (17) and is separated from a suction area (23) by a wall (26).
