Abstract (en)

[origin: EP0970650A1] The applicator has a recess (2) open onto its face which makes contact with the skin, a reservoir (3) for the product to be applied, located in the recess and designed so the product can make direct contact with the skin when the applicator is in use, and a porous material (4) able to retain a liquid and supply it directly to the product. The recess is set off-center in the porous material, and the product is in the shape of a tablet which fits into the recess. The porous material can be fitted with a handle or have an opening so it can be used like a glove.
