Abstract (en)

[origin: EP0970726A2] An enclosure piece narrowing the sling (6) holding it and pulled over it is formed by a loop (2) positioned crosswise to a loop (1) to which it is joined. The loop (1) is inverted over the sling. The two loops are at right angles to each other and at least one of them is in the form of a flat, elastic belt and is elastic. The loop inserted into the sling has a smaller opening (4). The two loops are sewn, stuck, riveted or welded together where they overlap (3).
