Abstract (en)
[origin: EP0970752A2] An adjustable lawn sprinkler has a line of water jets along a horizontal body which sweeps to either side to produce a water spread pattern. The individual jets are adjustable to produce different spread patterns which can be symmetric or asymmetric and which produce different rates of water application. The row of water jets can be side to either side or tilted at either or both ends to produce the different spread patterns. The line of jets is mounted on a flexible support.
