Abstract (en)

[origin: EP0970870A2] The train monitoring device uses a communication device (3a,3b) linked to the onboard computer for the locomotive (1) and each wagon (2) of the train, for communication with at least one monitoring center (5) via a long distance communication link (4). The communication devices communicate with one another via a short distance communication link (6), with polling of the data provided by each wagon communication device, which is normally held in a sleep mode.
