Abstract (en)

[origin: EP0971081A2] A support frame for panels fitted to the facade of a building has vertical profiles (1) linked by cross profiles to form the support frames for the panels. Each profile has a central rib onto which is pressed an elastic sealing profile (15,16) into which is screwed the outer clamping frame. The elastic profiles for the horizontal frames include water drainage ducts which lead to vertical ducts each side of the vertical elastic profiles.
