Abstract (en)
[origin: EP0971439A2] The arrangement has rows of base parts on a carrier rail with connections for a signal line and distribution elements combined with distribution strips for cross-distribution of electrical potentials. Distribution contact parts form two-pole cross-connecting connector parts with first and second cross-connection poles (6a,6d) outside a housing (4). The connecting poles of adjacent distribution contact parts can be connected together. Both cross-connecting poles have contact lugs and protrude out of the housing base towards a base part. The poles in a common distribution strip for adjacent contact parts lie flat against each other and can be connected together by a clamp part (8).
