Abstract (en)  
[origin: WO9824310A1] A spinning reel for fishing, of the type where line is wound onto a normally non-rotative spool (12) by means of a rotor (36). Rotary motion of the handle of the reel is transferred by gearing (24, 28, 30) into oppositely directed rotations of two bevel gears (32, 34). The rotor (36) rotates with one of these bevel gears (34) and, due to a pin (15b) engaging with worm groove (15a) on spool shaft (14), spool (12) is made to reciprocate (see arrows c-c). For higher-speed winding a control lever (not shown) may be moved to disengage clutch (38) from the reel body (46) and engage it with the other bevel gear (32). This forces the spool shaft (14) and its spool to rotate. As this rotation is in the opposite sense to that of rotor (36) the relative speed of rotor and spool is increased. The movement of the control lever may be effected by motion of a cable (not shown) running from a switch or lever on the handle of the fishing rod.
