Abstract (en)
[origin: WO9938733A1] The invention provides a device for protecting a motor vehicle against theft, said device comprising a controlling member in form of an electronic key, recognizing on its input a set memory code from an infrared or radio wave, an output of said electronic key being connected to a final control unit in a form of an electromagnet. The control member (56) and the final control member (57) are mounted and closed in the joint body (55) permanently fastened to the gearbox housing (50), and moreover the final control member (57) is coupled with an element (53) to be locked in the gearbox.
