Abstract (en)

[origin: WO9938784A1] An insulation packaging assembly (17) includes two rolls (10) of insulation material and a bag (16) enclosing the two rolls (10), with the bag (16) holding each of the rolls (10) in compression. The bag (16) is capable of being divided into two parts, thereby forming two bag ends (24), each with an opening (26), with one of the insulation rolls (10) being contained in each bag end (24). Compression of the bag (16) around the rolls (10) is great enough that when the bag (16) is divided, the bag ends (24) maintain a grip on the roll (10) contained in the bag end (24), thereby preventing the roll (10) from falling out of the bag (16) even when the bag end (24) is held upside down.
