Abstract (en)

[origin: WO9845513A1] The invention pertains to an element (21) for washing or treating a yarn or similar structure with a fluid, the element comprising a cavity (23) for guiding the yarn and at least one fluid jet (26) for directing the fluid into the yarn, characterised in that the cavity (23) is tube-shaped and communicates with the outside of the element (21) via a slot (24). With the said element the formation of aerosol is avoided and the consumption of fluid is halved.
