Abstract (en)

[origin: WO9845699A1] The invention relates to a device for continuous annular chromatography, comprising a particle bed in the form of a cylinder casing, and at least one feed point for the liquid stock material. The particle bed and feed point move in relation to one another. The invention is characterized in that at least one opening (12, 32) giving access to the particle bed is provided at the lower end of the particle bed chamber, especially for conveying the bed material.
