Abstract (en)

[origin: WO9844364A1] Portable equipment includes a GPS receiver (16), a receiver for differential correction signals (22) and a data logger (14), and also a gamma detector (30) whose signal pulses are classified into three energy ranges; the counts in these energy ranges are stored in the data logger (14). Once an area has been surveyed, the stored data on position and count rates can subsequently be downloaded from the logger (14) to a computer (34) for analysis.
