Abstract (en)

[origin: WO9842173A2] Banking services are used by means of a bi-directional short message connection. A user sends a request concerning a banking service as a short message which is routed via a cellular radio system (11, 12) and short message service center (13, 14) to a bank's user interface server (16). Data relating to the request are further sent to the bank's self service unit (17) which carries out the services requested and sends the resulting data in the form of short message back to the user.
