Abstract (en)

[origin: EP0972610A2] The holding device consists of a base (1), a number of holding arms (2), a swivel head (3), a carrying unit (4) and a fixing device. All elements are interconnected with beveled wheels (5), which are provided with cross-shaped elevations (8) at their back fitting into matching slots (9) at the ends of the holding arms (2). An inclination angle of 35 degrees and a division of 3 degrees have proved to be a perfect choice. After assembly and adjustment the parts are joined with central bolts (6).
