Abstract (en)
[origin: EP0972733A2] The apparatus has a fast conveyor with rollers and bands and a slow conveyor. The sheets etc. are transported between the bands of the two conveyors. A pair of rollers with recesses in its circumference is provided in the conveying path of one of the two conveyors. Coating sections (60) are provided on an arrangement of rotating bodies (22,23,24,25). These sections have a constant angular velocity which the occurrence of additional dynamic influences. The rotating bodies move about respective eccentric axes on cam shafts. These shafts rotate relative to the frame such that the rotating bodies and the shafts rotate with the constant speed. Independent claims also cover a product transport device in a folding device of a printer.
