Abstract (en)

[origin: EP0973142A2] On the rear side of the view container strips are so arranged that they form individual view compartments for accommodating product and/or price information. A pivot axis of the view container (3) is defined by at least one first fixture component provided on at least one side surface (15) of the view container. The view container can be folded outwards by a pivot movement around a pivot axis out of the support housing. The fixture component is formed as a hinge, comprising a button or pin (9a) and a corresponding cavity (9b) in which the button or pin engages.
