Abstract (en)
[origin: WO9846360A1] The invention relates to an electrostatic filter, especially a wet-type electrostatic filter, for separating liquids and/or solids from gases, with collecting electrodes which are tubular in shape and are interconnected electroconductively. These collecting electrodes are connected to ground individually or as a whole. The invention is characterized in that the tubes which form a support frame for the collecting electrodes consist of plastic and the collecting electrodes consist of cylinders inserted into these plastic tubes. Said cylinders consist of corrosion-resistant metal.
