Abstract (en)
[origin: WO9847716A1] A medium (10) for ink jet imaging includes a bottom layer (20) of material having a very high absorption for the polar, solvent component of an ink jet imaging ink, together with a top layer (22) of image receptor material disposed in fluid communication therewith. The bottom layer (20) has a very high affinity for the solvent component of the ink and tends to draw the solvent from a body of ink thereby preventing image spread and producing a localized, highly saturated image.
