Abstract (en)
[origin: WO9846456A1] The invention relates to vehicle parts with cavities. These cavities are dimensioned and shaped to function as λ /4-resonators. According to one application, the cavities between the shell (11) and the stiffening interior structural part (12) in engine hoods are configured as small tubular or pocket-shaped λ /4-resonators (13). According to another application, the posts of the car body are configured as λ /4-resonators. According to yet another application, the insulation layer of heat screens has a plurality of pocket-shaped λ /4-resonators.
