Abstract (en)

[origin: DE19714403A1] This invention concerns a process and a product for depositing and stacking foldable products. To this end, an endless web (4) of the foldable product (2) is folded in fanfold by a transfer device (7). Upon reaching a pre-set height, the stack (13) is separated from the web by the introduction of a cut-off knife (18) from which a knife (23) can be brought out. This knife (23) cuts a fold edge.
