Abstract (en)
[origin: WO9845201A1] The invention relates to a yarn tensioning device (23) comprising two tensioning elements (31, 32) between which a yarn (3) can be tensioned. A tensioning element is movably arranged in said tensioning device (23). Means (33, 34) are also provided so that the tensioning elements (31, 32) can be pressed against each other. The moveable tensioning element (32) is shaped like a plate which can tilt around a tilting axis located at a distance from and substantially parallel to the travel path of the yarn (3) which is to be tensioned
