Abstract (en)
[origin: EP0974383A1] The cross-section of the pin shaft (3), excluding the pointed area (3a), corresponds to the cross-section of the central aperture (6) of the flat-shaped gyroscope body (4). The flat gyroscope body is stamped out of the plate-shaped support (1), maintaining a small intended break point. The stamping process is by means of milling, stamping, wafer jet, and preferably by means of laser. The rear side of the plate-shaped support is covered with a sheet or foil-shaped protective layer (7), preferably on which matter can be printed. The plate-shaped support is rectangular with dimensions 10cm x 15cm.
