Abstract (en)
[origin: EP0974429A2] The holder has a mounting (12) for a shaft of the tool (14) with at least one locking part (22,24) projecting into the mounting for locking the tool shaft. Two opposing capturing sections (18,20) have symmetrical and radially running flanks (30,32). The capturing sections extend over different angular regions from one another, so that the flanks lie at different diameters. One of the capturing sections extends over 30 degrees and the other extends over 48 degrees. The capturing sections project inwards to the same radial depth. The shaft of the tool has at least one lock groove (26,28) and two capturing grooves (34,36).
