Abstract (en)

[origin: EP0974526A2] The bag pack uses a bag which is blocked at one edge strip and with a perforated tearing line below the blocking. There is a weld seam in the region opposite the edge strip to form the bag bottom. Each bag is folded round a fold line running in the longitudinal direction of the bag. In the folded-in position, it is blocked in the edge region (R). The tearing line (107) is in the form of sickle-shaped cuts (107a) extending to the long side of the bag, so that the folded bags (1) are separated at the outer side edges (103a, b) from the blocked edge strip.
