Abstract (en)  
[origin: EP0975070A2] A square-shaped casing takes a carbon brush pushed in and has an opening (16) on its face side for passing the carbon brush through. A spring (41) fitted in the casing acts upon the carbon brush and is restrained by a device on the side of the casing. A second restrainer (48,50) runs towards the rear side of the casing to operate with the spring.
