Abstract (en)

[origin: FR2761912A1] The invention concerns a method for making a product adhere to a surface, characterised in that it consists in contacting with said surface a composition wherein said product is incorporated in substantially spherical multilamellar vesicles, with a diameter between 0.1 and 100  $\mu\text{m}$ , consisting of concentric membranes based on at least a surfactant separated by a solvent medium, said vesicles having an onion-like structure and bearing a global positive charge related to the presence of at least a cationic agent within said vesicles. The surface to be treated can be either an inert surface, for instance a fibre or an assembly of fibres such as a fabric, or a biological surface such as the skin, the hair, hairs, superficial body growth, the cuticle of living beings or the cuticle of plants.
