Abstract (en)

[origin: WO9847628A1] The invention relates to a method for applying adhesive onto a material web, in particular onto flute crests of a corrugated side of a material web, wherein the adhesive is applied onto the surface or into the pores of a screen (30) or a continuous strip (9) with a structured surface (9a), which extends over the whole width of the material web, and wherein the surface of the lengthwise displaced material web (5) that is to be glued is brought into contact with the adhesive located on the surface or in the pores of the screen (30) or of the continuous strip (9). Instead of directly applying adhesive from a continuous strip or continuous screen onto the web which is to be glued, adhesive can first be applied onto an adhesive application element, and from this onto the web which is to be sized. The invention furthermore relates to corresponding glueing devices for implementing this method.
