Abstract (en)
[origin: WO9840587A1] The invention relates to a security construction (1) for the top of an enclosing wall (M), comprising supports (2) which have a fixing section (2a) and a bracket (2b) angled opposite said fixing section, and a fence covering consisting of a fence element (4) which is fixed to the fixing section (2a) of the supports (2) and an expanded metal element (3). Said expanded metal element (3) has a first section (3a) which is supported on the top surface (2e) of the bracket (2b), a second section (3b) which is angled opposite said first section (3a) towards the underside (2g) of said bracket (2b) and a third section (3e) which is angled from said second section (3b). Said third section (3e) projects freely over the free end (2f) of said bracket (2b). A security construction of this type is easy to assemble with a high degree of efficiency.
