Abstract (en)

[origin: WO9840738A1] The present invention relates to improved prostate specific antigen substrates, and provides for a method of purifying such substrates as well as compositions comprising the substrates themselves. These substrates may be used in assays which measure prostate specific antigen activity. Such assays may provide a clinical evaluation of patients suffering from, or at risk for, prostate cancer, and also may be used to identify therapeutically useful inhibitors of prostate specific antigen activity.
