Abstract (en)

[origin: DE19716392A1] The invention relates to a device for selectively processing on individual components of a flat electronic sub-assembly in predetermined ambient conditions. This device comprises a receptacle for lodging the sub-assembly module, the cover surface (18) of which has an opening (44) for inserting a working tool. The opening (44) is formed eccentrically in a disc (52) which is rotationally mounted in the covering surface (18).
