Abstract (en)
The use of, and a method of constructing a ball carrier and subsequently forming at least one target for a ball game. The apparatus comprising first and second releasably connectable components (1, 2) which can carry a spherical football (6) and subsequently to provide at least one pair of goal posts which can be used in a game of association football. The first and second components being used connected together by connecting means (8, 9) to together define a container in which the football may be carried. The first and second components being used disconnected from each other to define therebetween a first pair of goal posts by positioning the first and second components on the ground in the spaced apart relationship. A method of constructing the carrier and subsequently forming the target is also disclosed. <IMAGE>
